PAPER GRADES

Paper grades are developed for specific uses.

Bond is an everyday sheet used for letterhead, business forms, and copiers.

Book and **offset** are the most commonly used coated and uncoated paper grades in commercial printing.

Text and **cover** are versatile, high-quality grades offered in a multitude of colors and finishes.

Tag, **bristol** and **index** papers are stiffer and are used for displays, file folders and tickets.

There are variations within each grade, depending on the sheet's optical and physical properties.
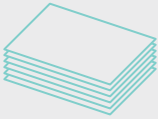

KALLIMA COATED COVER

Our lightweight coated cover is made of one layer of **high-yield pulp** sandwiched between top and bottom layers of **bleached chemical pulp.**
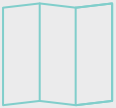

The topside is coated, and the backside is either **uncoated, lightly coated** or **fully coated.**

We express these coating options as C1S, C1S Plus and C2S, respectively.

kallima

C1S

C1S+

C2S

C1S is often used for business, appointment and greeting cards, book covers and point of purchase signage.

C1S Plus has a gloss finish on the topside and a more matte finish on the backside (suitable for **most printing techniques**), making it a cost-effective alternative for projects requiring backside printing.

C2S is typically used for magazines, brochures, folders, posters, calendars and menus.

OUR CALIPER OFFERING

C1S	8, 10, 12 , 14 and 16 pt
C1S Plus	8, 9, 10, 12 and 14 pt
C2S	8, 10, 12, 14 and 16 pt
